Technical Bulletin

“MANGIAMACCHIA” ABSORBING PASTE

Special paste for removing most common spots on natural stones

Description:

Mangia Macchia “*stain eater*” is a specially designed pre-mixed poultice paste formulated to eliminate spots on natural stones such as marble, granite, travertine, calcareous stones, slates, terra-cotta and ceramics. It will remove the most common types of stains such as, oil, industrial grease, food, coffee, wine, water spots, etc. The paste absorbs deeply into the stone allowing it to remove deeply resistant spots. *Please note: If the overall surface has not been thoroughly cleaned, “spot stain removal” may leave a “clean stain” as Mangia Macchia will remove old dirt as well as the stain. Will also remove dye from dyed stone. Will also remove acrylic coatings. Will also remove impregnation.*

Technical Characteristics:

Appearance	paste
Color	light brown
Odor	characteristic
Hydro-solubility	soluble at every ratio
pH	8.2+0.2
Biodegradability	100%
Shelf life at 68°F	12 months in original packaging

Instructions for Use:

Apply a thin layer (approximately 1/4 to 1/2 thick) on the area to be treated using a spatula. Completely cover the treated area with a plastic film such as common plastic wrap to insure the paste remains moist as the product works by absorbing the stain out of the surface. After 2-3 hours or for deeply embedded stains as long as 24 hours, remove the plastic film. Remove the paste with a spatula.

- Thoroughly mix the paste with a wooden or plastic stick before use.
- Insure that the paste adheres firmly to vertical areas. Poultice powder may be added to the product to make it thicker. Poultice powder is sold separately.
- Use a thicker layer of paste when removing oil stains.
- Depending upon the type of stain and/or the depth of the stain, a second application may be necessary.
- After the application, use Multiclean to thoroughly clean marble, terrazzo and calcareous stones.
- Please read all instructions on the container before use.

Application on Surfaces:

All surface types, specifically marble, granite, stone, terra-cotta, engineered stone, etc. ALWAYS DO A TEST PATCH BEFORE USING.

Coverage:

Depends upon the size, intensity and type of stain to be removed. Mangia Macchia is designed to remove smaller stains. Larger stained areas and/or general soil on floors and walls should be removed with Multiclean or Ultrastripper.

Packing:

Available in 12 ounces packaged in 16 ounce plastic jars, Gallons and 5-Gallons.
